Dear NewsCred Team

I am an undergraduate student of Computer Science & Engineering in Rajshahi University of Engineering and Technology. I learned about your Software Engineer Internship program from the career section of your website and upon further researching, I have come to believe I can satisfy your requirements and expectations well.

One of the most important requirements in the internship details was good analytical skill and programming knowledge of data structures and algorithms. During my undergraduate years, I focused a lot in competitive programming which sharpened my programming logic sense and implementation skills rigorously while learning various data structures and algorithms. I regularly participated in many onsite and online programming contests (ACM ICPC Dhaka Regionals, NCPC, IUPCs, CodeForces etc) and achieved good result. In individual mode onsite contest, my best rank was 5th in final round of SRBD 2018 (arranged by Samsung R&D). As for ACM formatted team contests, my best rank was 11th in IUBAT NCPC 2018.

I was also class representative of my section throughout the whole four years of university life, building up my teamwork, motivation and leadership skills. I have always been eager to learn a variety of things. I did some research work as well in my final year, leading to a publication in IEEE Xplore as well, through the conference ECCE 2019, CUET. My research interest lied mainly in data science and my research field was bioinformatics. The coursework in our university was such that it promoted a lot of practice in English which added to my fluency in English.

All these led me to believe that I am suitable for your intern program. I chose this program because I really like the vision and culture in your organization and I believe I will be able to contribute my best in an environment like this while enjoying my work to the fullest.

Thank you for your consideration. I look forward to hearing from you soon.

Best Regards

Tahsin Masrur
